**RASopathies** are a group of genetic conditions caused by mutations in genes on the Ras-MAPK pathway. These conditions, including Noonan syndrome/Noonan-related conditions (NS), cardio-facio-cutaneous syndrome (CFC), Costello syndrome (CS), and Neurofibromatosis type 1 (NF1) which share many clinical features, such as developmental delay, gastrointestinal difficulties, skeletal abnormalities, hematologic abnormalities, and growth delay. One $69,885 grant is available. This grant will be awarded to initiate or advance research in RASopathies specifically in the adult population (those over 18 years of age). Research can be of one of the following and must demonstrate how it will shed light on the other of the following RASopathies: CFC, CS, NS. This grant is made possible by Team RASopathies Network Riders and the RASopathies Network.
